Essential
Important
Mean-effect
Enhancing
a
Glucose
small molecule biosynthetic process [107]
translation [79]
purine ribonucleotide metabolic process [20]
positive regulation of gene expression [13]
nucleobase biosynthetic process [11]
biological process involved in interaction with host [4]
purine nucleotide metabolic process [13]
membrane organization [7]
cellular homeostasis [12]
mRNA catabolic process [5]
transmembrane transport [215]
carbohydrate metabolic process [182]
detoxification [47]
DNA damage response [154]
response to oxygen-containing compound [49]
iron-sulfur cluster assembly [4]
cytokinesis [2]

b
Galactose
translation [78]
small molecule biosynthetic process [102]
purine ribonucleotide metabolic process [20]
positive regulation of gene expression [13]
nucleobase biosynthetic process [11]
DNA damage response [17]
membrane organization [6]
regulation of gene expression [34]
tricarboxylic acid cycle [6]
pyrimidine-containing compound biosynthetic process [4]
response to stress [327]
transmembrane transport [203]
catabolic process [270]
detoxification [47]
chemotaxis [15]
negative regulation of gene expression [5]
regulation of DNA-templated transcription [10]
